Platelet Rich Plasma (PRP)

Platelet Rich Plasma is a unique new treatment that uses the patient's own blood to rejuvenate the skin. PRP is blood plasma containing concentrated platelets. These platelets contain huge reservoirs of bioactive proteins, including growth factors that are vital to initiate and accelerate tissue repair and regeneration. These bioactive proteins initiate collagen synthesis and deposition.

This augments the skin by improving the skin tone, texture and colour. Marked improvement in the skin condition and overall appearance is expected. Please contact Dr. Bitlan for more information, or visit our website.
